**NATURE TRAIL
CAMÍ DE CAVALLS**

1. The itinerary by road to the

- 1.** The itinerary begins at the end of the port of Maó and heads by road to the town of Sa Mesquida, running through coves and agricultural land, until it reaches the Natural Park of S'Albufera des Grau. Continuing along the coast, you reach the vicinity of El Cap de Favàritx, and El Pou den Caldes. After passing this cove, you can see striking rock formations such as that of Es Capell de Ferro. Further ahead, the route reaches the wetland area of Port d'Addaia and the salt pans of Mongofra.

2. Following the route, you will come to the beach of El Arenal d'en Castell, and the beach of Son Saura del Nord. On leaving Ses Salines, we reach Cala Tirant by a paved road. A good stretch of the Trail runs through an area listed as a Site of Community Importance (SCI) and a Special Protection Area (SPA) for Birds owing to its enormous ornithological interest as most of the reproductive species on the island

3. On the beaches of Binimelà, Tirant and Cavalleria, the dune systems consist of important plant communities and, a short distance away, you have the chance to visit the archaeological site of the Roman city of Sanicera. From Binimelà to Els Alots, the Trail runs along a stretch of virgin coast to the north of the island, where the terrain is more rugged. The North of Menorca Marine Reserve is located in the waters that bathe

4. Following the coastline, the Trail goes as far as Cala Morell. Its cliffs house an important necropolis from the Talayotic era (1500-300 BC), formed by caves dug out in the rock (hypogeums). The island often has very arid landscapes to offer. This is the case of the leg which runs between Cala Morell and Punta Nati. From Puntata Nati to Ciutadella, the Trail is especially rocky.

5. El siguiente tramo de la ruta comienza en el puerto de Ciutadella y cruza la ciudad. The next stretch of the route begins at the port of Ciutadella and crosses city. Continuing along a paved road, you reach Cala Blanca. From El Cap d'Artrux to onwards, you can admire the beauty of the south-west coast and the ravines in the south of the island. Worthy of note is the wetland area of El Prat de Bellavista, behind the beach of Son Saura, which serves as shelter for a diverse array of water fowl.

6. The most important ravines on the island can be found between Cala Galdana and Sant Tomás, such as those of Algendar, Trebalúger and Albranca. The following section of the route takes you to the south of the island, crossing between two important ravine areas: that of Sa Vall and Es Bé, to the west, and that of Cala en Porter, to the east. On reaching the last segment of this section, you can access

This photograph captures a coastal scene from a high vantage point. On the right, a massive, light-colored limestone cliff rises, its surface marked by numerous vertical fissures and patches of green vegetation clinging to its face. Below the cliff, a sandy beach stretches along the coastline, dotted with small green bushes and trees. To the left of the beach, a dark, dense forest covers a hillside that slopes down towards the sea. The sky above is a clear, vibrant blue, providing a striking contrast to the earthy tones of the landscape below.

AMONG FORTRESS ON HORSEBACK

7. From Cala en Porter to Punta Prima the route enters a flat area although you will still come across some ravines like Calades Canutells, whose interesting elm forest will surprise you. An easy flat section emerges which crosses the south-eastern urban areas of the island. The route continues along a coastal road which links the towns of Binibéquer, Biniancolla and Son Ganxo together. On leaving Binibéquer Nou, the pathway follows a route next to the sea, from where the Island of El Aire can be seen. This stage from Punta Prima to Maó runs along one of the flattest coastal areas of Menorca.

8. On the easternmost point of the island, the Trail follows the part of the route that is furthest inland. Climbing up a small slope which begins at La Cala de Sant Esteve, you follow the Trail along an urban road that offers magnificent views of the port of Maó and the fortress of La Mola. In the vicinity of La Cala de Sant Esteve, on the southern side of the estuary of the port of Maó, you will discover the Fort de Marlborough. Passing by the castle of Sant Felip and the town of Es Castell, the route continues as far as Maó, the capital of Menorca, where the Trail ends.

Since 1993 the Ministry for Agriculture, Food and the Environment's Nature Trails Program aims to restore former transport infrastructures such as railway tracks, cattle trails and traditional routes, for public use and enjoyment. These routes take us to the countryside to discover the biodiversity and beauty of our precious natural heritage, and rediscover the villages, sights, traditions and people that are part of the unique cultural landscape of our country.

We invite you to visit them and offer you the keys to enjoy the trip. In this brochure you will find a brief description of Camí de Cavalls Nature Trail and the map for the journey, along with recommendations to make the most of this experience. We only ask one thing of you: do not forget to leave everything as you found it. The conservation of these pathways is also your responsibility.

IPPCo
A route crosses places of high natural and scenic interest, such as the Natural Park of La Albufera des Grau, La Illa d'en Colom and El Cap de Favàritx, highlighting the enormous environmental value of the area. With good reason, in 1993, the whole of the island of Menorca was listed as a Biosphere Reserve by the UNESCO.
